

ANNOUNCING.....

HydraStix™

HIGH MOISTURE SERIES

**Works
where
others
fail**

HydraStix products are a next generation line of flooring products created for the most demanding of installations. These new products have been designed to perform where other adhesives and sealers cannot. All of the products in the HydraStix series can withstand excessive RH readings, as high as 99% in some instances.

With two lines, the HydraStix 95 and HydraStix 99 you can choose to either protect the flooring installation from moisture, sound or alkalinity with one of our 99 Series sealers, or go straight to substrate with one of our 95 Series adhesives.

Indoor Air Quality

Not only do these products provide superior performance, they also meet or exceed Indoor Air Quality Standards for SCAQMD Rule#1168 and California Section 01350.

CERTIFIED BY
SCS Global Services

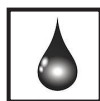

HydraStix Series Products may solve your substrate challenges with:

Superior Sound Reduction Ratings

Tremendous Bond Strength

Advanced Moisture Resistance

Crack Suppression Properties

HydraStix 95 Resilient

For most resilient flooring
